

SYNERGY LEGAL — PERSONAL INJURY DEPARTMENT

AI Foundation Blueprint

3 Steps to Make Claude Your Firm's AI Brain

STEP 1

CLAUDE.md

Teach Claude who Synergy is

STEP 2

Context Folders

Store your playbook, cases & tools

STEP 3

Skills (S# Library)

Turn your S# procedures into AI tasks

Step 1 — Write Your CLAUDE.md

CLAUDE.md is the first file Claude reads every time you open it. It's where you tell Claude exactly who Synergy Legal is, who your perfect client is, how your team talks to people, and what rules to follow. Think of it as onboarding Claude the same way you'd onboard a new case manager — firm identity, client standards, communication rules, and hard limits.

Your Synergy CLAUDE.md — Starter Template

Copy this. Fill in the brackets. Save it as CLAUDE.md in your GTM-Stack folder.

```
# WHO WE ARE — SYNERGY LEGAL
Firm: Synergy Legal, Personal Injury Department
Status: Live since Nov 2024 | Owner: Dejon Brooks
Practice: Personal injury — auto accidents, slip & fall, workers comp,
liability cases, small claims, UIM/BI negotiations
Tools: Monday.com (case management), GoHighLevel (CRM + leads),
Master Spreadsheet (insurance + medical data)

# OUR IDEAL CLIENT
Adults hurt through someone else's fault — clear liability, real injuries.
Strong case: ER/hospital visit, insured defendant, clean liability.
Refer out: no insurance, expired SOL, already represented, outside state.

# HOW WE TALK
Warm, clear, direct. No legal jargon. Short sentences.
We are on their side from the first call — make that obvious.
Always tell the client exactly what happens next.
We have English AND Spanish speakers on staff — match the client's language.

# PLAYBOOK RULES (from R#001)
All demand letters need attorney final review before submitting (S#012).
Never promise a settlement amount to a client.
All documents go in the client's Monday.com folder (S#065).
PII is never stored in plain text outside of secure systems.
```

```
Wrongful death, major TBI, or litigation cases – alert managing attorney first.
```

```
# WORKFLOW TRIGGERS (see Step 3 for full skill list)
IF: new lead arrives → run intake-triage.skill
IF: case reaches demand phase → run demand-prep.skill
IF: Monday = weekly update day → run client-update.skill (S#009)
IF: content needed → run content-generator.skill
```

What This Covers From Your Existing Playbook

- R#001 (Business Playbook) — firm identity, rules, and brand voice are now locked into Claude permanently
- R#045 (Job Titles & Daily Workflow) — Claude understands each role and won't overstep staff responsibilities
- R#019 (Customer Journey PDF) — Claude knows the full client journey and can assist at every stage
- T#034 (ChatGPT Prompt Library) — your existing prompts can be moved into skills for consistent use
- R#003 (Negotiations Case Matrix) — stored in context folders so Claude references it during every negotiation task

Step 2 — Build Your Context Folders

Folders are Claude's memory. Every time Claude does a task, it reads these folders first — so it already knows your case types, your providers, your competitors, and how Synergy works. You're not starting from scratch on every session. You're giving Claude a filing cabinet that already has everything it needs.

Your tools — Monday.com, GoHighLevel, and your Master Spreadsheet — store the live data. These folders store the knowledge, rules, and context that help Claude use that data the right way.

The Synergy Folder Structure

Folder	What Goes Inside	Synergy Reference
cases/	Case type guides — what a strong case looks like, settlement ranges, common tactics by insurer	<i>R#003 (Case Matrix), R#012 (Negotiations Playbook)</i>
clients/	Per-case notes using case ID (not client name). Medical timeline, liability notes, strategy memo	<i>S#065 (Monday.com onboarding), R#004 (Master Spreadsheet)</i>
medical-providers/	Every provider in your network — specialty, contact, turnaround time, billing patterns	<i>R#006 (Medical Provider Contact List), S#007 (Referring Clients)</i>
negotiations/	Insurer behavior patterns, adjuster notes, offer history, escalation triggers per carrier	<i>R#012 (Negotiations Playbook), R#051 (Lien Tracker)</i>
competitors/	What competing PI firms say in ads, their reviews, their fees, and how to stand out against them	<i>R#022 (Social Media/Ads Resources)</i>
campaigns/	GoHighLevel ad performance, best-performing lead scripts, FB Ads data, appointment warmup results	<i>R#024 (FB Ads Lead Sheet), T#025 (Lead Scripts), T#026 (Warmup)</i>
voice-guides/	Real phrases clients use — pulled from intake calls and GoHighLevel transcripts. Makes Claude sound human.	<i>R#007 (Client Testimonials), S#009 (Weekly Update Process)</i>
finance/	Settlement sheet structure, lien types, payroll notes, check process — so Claude understands the money side	<i>S#019 (Settlement Sheets), S#053 (Reductions), S#061 (Client Checks)</i>

How Your Tools Connect to the Folders

Tool	What It Does	How Claude Uses It
Monday.com	Tracks every case — status, tasks, deadlines, notes	Claude reads case context from Monday via MCP or copied notes. Skills reference S#065 for folder structure.

GoHighLevel	CRM for leads, SMS/email automations, appointment scheduling	Claude pulls lead data for triage scoring. T#023 (Auto SMS) and T#026 (Warmup) become Claude-triggered skills.
Master Spreadsheet	Insurance data, medical provider info, settlement tracking	Stored summaries go into cases/ and medical-providers/ folders. Claude references R#004 patterns during negotiations.

Build These Two Folders First (Day 1)

- cases/auto-accident/ — pull from R#003 (Case Matrix) and R#012 (Negotiations Playbook). Write what a strong auto case looks like and your typical settlement ranges.
- voice-guides/ — pull real phrases from your GoHighLevel intake transcripts and R#007 (Client Testimonials). This is what makes Claude sound like Synergy, not a robot.

Step 3 — Turn Your S# Procedures Into Skills

You already have a full library of step-by-step procedures in your R#001 playbook. Each S# procedure has Steps 1, 2, and 3 clearly mapped out. That's exactly what a Claude skill needs to work. You're not writing skills from scratch — you're translating what your team already does into instructions Claude can follow automatically.

How an S# Procedure Becomes a Skill

Your Playbook (S# Procedure)	The Claude Skill Version
S#009 — Weekly Client Update Process - Step 1: Pull all active cases due for update - Step 2: Draft update message per case status - Step 3: Send via text/email and log in Monday	client-update.skill - Load: clients/ folder for all cases flagged 'update due' - Draft: warm, plain-language update for each case in Synergy voice - Output: ready-to-send messages + Monday.com log entry draft

Your Priority Skills — Mapped to Your S# Procedures

#	Skill Name	Based On	What It Does
1	intake-triage.skill	S#042, S#065, S#004, R#003 <i>Case Matrix</i>	Scores new leads from GoHighLevel against your ICP. Routes to accept, review, or referral partner. Generates a scorecard for your intake team. Fires automatically when a new lead hits the system.
2	client-update.skill	S#009, T#023 <i>Auto SMS</i>	Every week, pulls all cases due for an update, drafts a warm plain-language message for each client in Synergy voice, and outputs ready-to-send texts/emails plus Monday.com log entries.
3	demand-prep.skill	S#011, S#012, S#055, T#002, T#009, T#010	When a case hits demand phase, pulls the case file, medical timeline, and damages. Drafts the demand letter framework using T#002 template. Runs through T#009 (Demand Checklist) before flagging for attorney final review per S#012.
4	negotiation-strategy.skill	S#013, R#012, R#003, R#006 <i>Email Sequence</i>	For any case in active negotiation, loads the carrier profile, offer history, and R#003 Case Matrix. Recommends the next move — counter-offer amount, escalation trigger, or settlement range — and drafts the negotiation email using R#006 sequence.
5	settlement-sheet.skill	S#019, S#053, S#052, T#013, T#016	When a case is ready to close, generates a draft settlement sheet (T#016), flags any liens to verify (S#053), and runs through the BI release process (S#052). Attorney reviews before anything is sent.

6	content-generator.skill	<i>R#022, T#025, T#027, T#026, R#030, R#031</i>	Creates blog posts, GoHighLevel ad copy, social media content, and appointment warmup messages in Synergy's voice — English and Spanish. Pulls from voice-guides/ and your best-performing campaigns. Uses T#027 and R#030/R#031 for tone and structure.
7	competitor-intel.skill	<i>R#022, R#040 AI Ideas</i>	Every Monday, checks what competing PI firms are saying in their ads and reviews. Outputs a short battle card with their weaknesses and a recommended messaging response for Synergy's campaigns.
8	uim-demand.skill	<i>S#041 UIM Demand Letter, T#002, T#009</i>	Handles UIM demand letters separately from standard BI demands. Follows the UIM-specific workflow, applies the correct template from T#002, and runs the S#041 checklist before routing to attorney review.

Your First 5 Days

- Day 1 — Install Claude Code (claude.ai/code). Create your GTM-Stack folder. Write your CLAUDE.md using the template on page 1.
- Day 2 — Build cases/auto-accident/ using R#003 and R#012. Build voice-guides/ from your GoHighLevel intake transcripts.
- Day 3 — Write intake-triage.skill based on S#042 and S#065. Test it against your last 10 accepted leads.
- Day 4 — Write client-update.skill using S#009 and T#023. Run it for one week of pending case updates and review the output.
- Day 5 — Build medical-providers/ folder from R#006. Add negotiations/ folder with carrier behavior notes from R#012.
